Microsoft Sentinel

Modernize security operations and focus on what matters most with cloud-native SIEM, powered by AI.

Microsoft Sentinel is a cloud-native security information and event management (SIEM) platform that uses built-in AI to analyze large volumes of data across an enterprise—fast. Microsoft Sentinel aggregates security data from all sources, including users, applications, servers, and devices running on-premise or in any cloud. By eliminating on-premises infrastructure, it lowers costs by 48% compared to legacy SIEMs, as found by the commissioned Forrester Consulting Total Economic Impact™ of Microsoft Sentinel study. What’s more, it reduces alert fatigue by 90% with machine-learning (ML) and analytics. With Microsoft Sentinel, your team can focus on what matters most: protecting your organization.

How Armorblox integrates its cloud-delivered Email Security Platform with Microsoft Sentinel

The Armorblox cloud delivered email security platform integrates with Microsoft Sentinel to help InfoSec teams better defend against threats like business email compromise (BEC), ransomware, phishing, and vendor/supply chain attacks. With this integration, Armorblox can now successfully ingest email threat intelligence into their SIEM infrastructure to prevent, detect, investigate, and respond to the most sophisticated email-based attacks.

Customer Benefits

- Provides customers a unique approach to stop BEC and phishing attacks using artificial intelligence, behavioral analytics, and natural language understanding.
- Prevents financial loss/data loss/ransomware by stopping attacks that target business workflows.
- Shares threat intelligence, optimizes playbooks, and enriches threat hunting for SecOps teams with the seamless API-based integration between the Armorblox email security platform and Microsoft Sentinel.
